

Case Study: Ingliston Equestrian Centre

When Ingliston Equestrian Centre, a stunning Show Jumping ground based near Glasgow entered into a multi-million pound refurbishment project, they specified Metrotile Lightweight Steel Roofing to help raise the centre to international standards.

Metrotile supplied over three thousand square metres of roofing materials to two new stable blocks and numerous new Chalet buildings at the site. Metrotile Slate in Bronze was specified as it combines a stunning traditional look with a swift installation and a low weight that reduces stress upon the supporting timber frame structures of both the chalets and the stables. Stunning countryside surrounds Ingliston Equestrian Centre and the Metrotile Slate compliments the local area gracefully, as can be seen in the accompanying images.

Many specifiers are turning to the Metrotile for a variety of projects, including stunning developments such as Ingliston, as our lightweight steel roofing systems offer far greater benefits than traditional roofing materials, complimented by our industry-leading 40 year weatherproof guarantee.
